

What's New - UVC Mobile APP Version 3

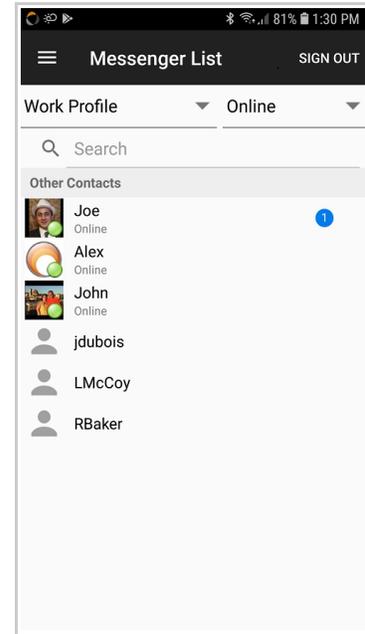

New messenger and chat module now available in the UVC mobile APP. Click the **Messenger** module to get access.

(iPhone)

(iPhone)

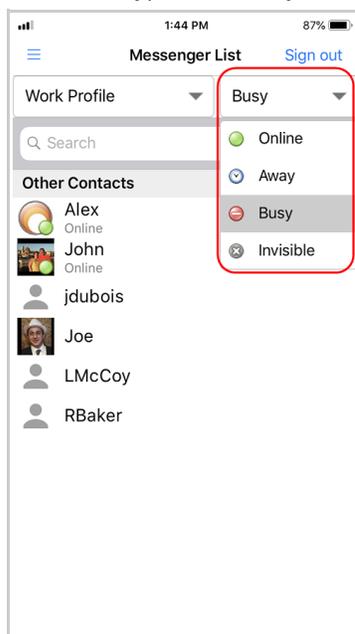

(Android)

You can see all of your online contacts and their status in the list. Grouping uses the same settings as what is defined in the UVC desktop app. If you would like to change or add additional groups please do so in the desktop app and the changes will apply on the mobile app.

1. Click the **status drop-down menu** to change your current status on messenger. Just like in the UVC application the options are *Online*, *Away*, *Busy* and *Invisible*.

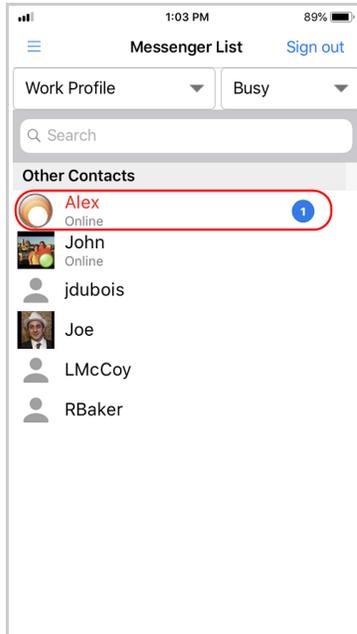

When the app goes in the background, UVC will automatically change your status to *Away* (on Android devices only) and when you come back it will change back automatically to online.

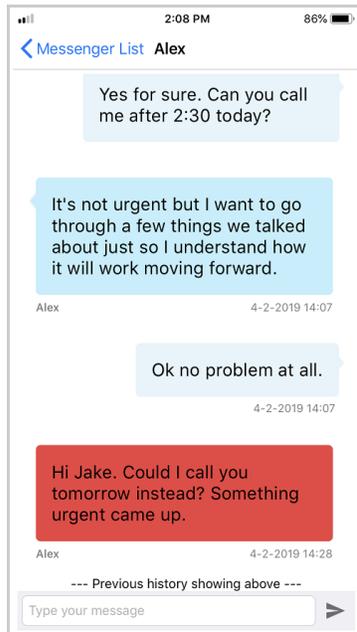

Take note: your profile status will be updated to the one selected once you login to your desktop app.

2. Messenger contact names will appear in **red** if you have received offline messages from them. They also get pushed to the top. The number of unread chat messages that they sent will appear besides their name.

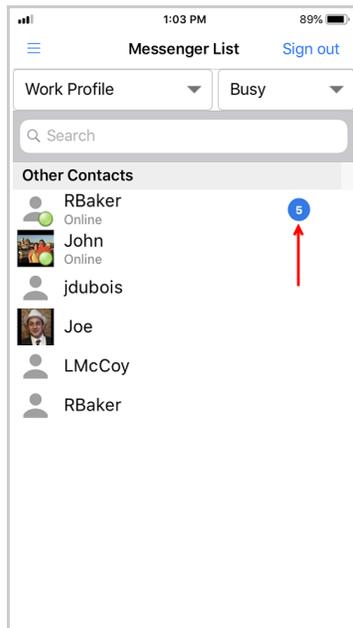

Click on the desired name to see missed messages.

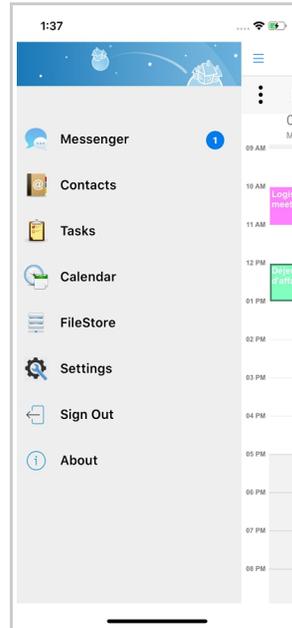

3. All missed unread chat messages that are received, while signed out from the UVC mobile app, will be displayed in **red**.

4. As users send you messages within the mobile app, you can see the number of active chats and unread messages in the messenger list. This will also be seen when you switch from one module to another.

(iPhone)

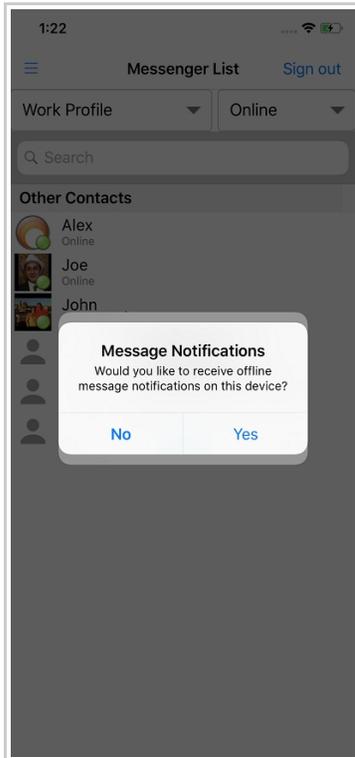

(Android)

Take note: missed unread messages will not appear in red if you are logged in to the UVC mobile app.

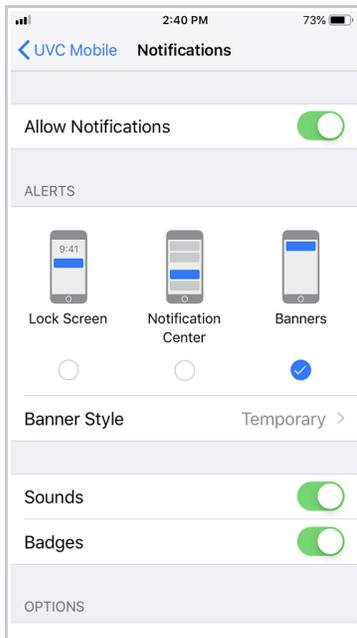

5. A red **notification indicator** will be displayed next to the UVC APP icon on your mobile device. This is telling you that there are unread offline messages.

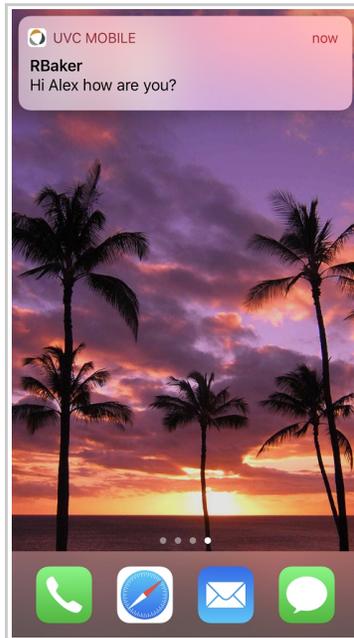

6. A **message notification popup warning** will appear once you login to UVC. Select the option of your choice to enable/disable the notifications of the UVC Mobile app when you are offline.

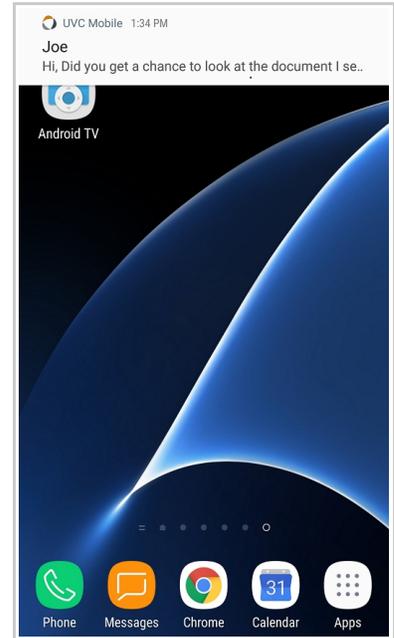

7. UVC messenger notifications for missed chat messages will only be displayed on your mobile device if they are enabled specifically for the UVC mobile APP. Make sure that these settings are properly configured in the settings of your mobile device.

(iPhone)

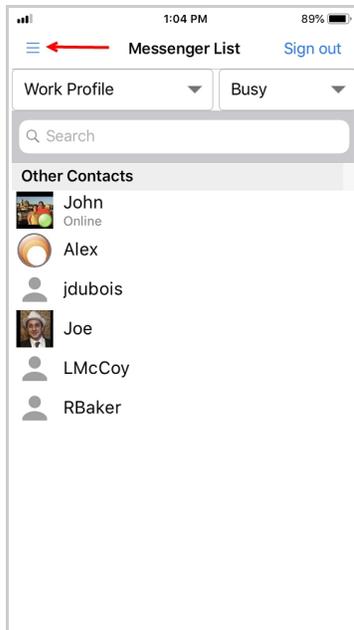

(iPhone)

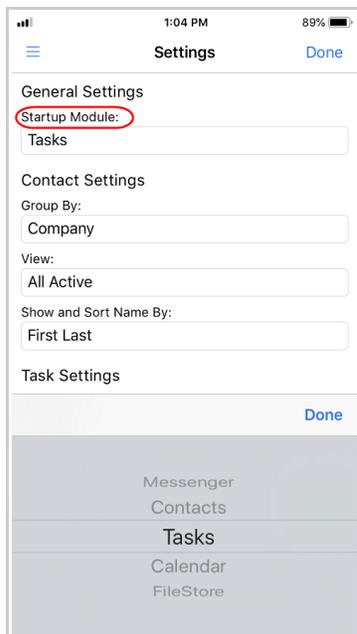

(Android)

UVC mobile users now have the ability to select the default module they will see when they login to the app.

1. Click **Menu** and then the **Settings** option.

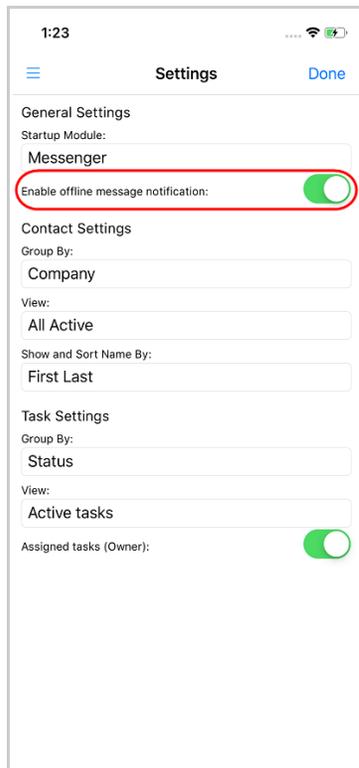

2. Click the **Startup Module** button to select which module you want to view when you login. The options are Messenger, Contacts, Tasks, Calendar, File Store.

3. Click on the **Done** button to save your changes. Moving forward the selected module will be the first screen you will see when you login.

Option to enable/disable message notifications can be changed manually.

1. Click the **Menu** and then the **Settings** option.
2. Move the slider under the **Enable offline message notification** option.

Enhancements

1. When you click on the calendar it will show you the details of which calendar and user it belongs to.
2. The tasks list look and spacing has been improved to make it easier to read.

Defects Corrections

1. Fixed issue with dates on email messages showing in GMT time.
